

# How to turn your local chicken into money makers

## If you start with 10 mature hens and 1 cock:

- 10 hens lay about 20 eggs in 1 cycle = **200 eggs**.
- A hen can hatch 15 eggs:  **$10 \times 15 = 150$**  chicks.
- 1 hen will have **161 birds ( $150 + 10 + 1$ )** after hatching
- About 40 out of 100 are cocks— you would remain with 90 new hens + 10 old hens = **100**.
- After 6 months birds will be mature to lay eggs.
- 100 birds will lay 2,000 eggs ( $100 \times 20$ ) per cycle.
- Each hen can hatch 15 eggs, the chicks will be 1500 plus 100 mature hens = **1600 birds**.
